

RPM 460

Description

RPM460 is an ultra-fast setting hydraulic mortar which offers immediate and long-term protection against water leakage. It hardens within seconds and increases slightly in volume while setting.

Product Advantages

Ready-to-mix powder.

Can be used underwater.

High resistance to pressure.

Preparation

Apply the product by hand and press firmly for several seconds until hardened.

Do not knead during application.

High-flow waterways should be sealed in several stages.

The treated area must be cooled and kept damp for 15' approx.

For high pressure leaks make the hole as regular as possible. Being filling the areas which are subject to the lowest pressure and work in a stages towards the high pressure area. For the final seal, make a ball of mortar and press firmly.

Specification

Nature: Gray Powder

pH: 12±2

Density: 1.41±0.05
